Real-Time Rendering Resources
Real-time computer graphics or real-time rendering is the sub-field of computer graphics focused
on producing and analyzing images in real time. The term can refer to anything from rendering an
application's graphical user interface to real-time image analysis, but is most often used in
reference to interactive 3D computer graphics, typically using a graphics processing unit (GPU).

Real-time computer graphics - Wikipedia
3D rendering is the 3D computer graphics process of automatically converting 3D wire frame
models into 2D images on a computer. 3D renders may include photorealistic effects or non-
photorealistic rendering

Are architects really turning to real-time rendering for visualization? Epic Games, the creators of
Unreal Engine, decided to find out with an independent survey. The results confirmed what many ...

Those using Rhinoceros, by Robert McNeel and Associates (RMA), as their 3D authoring tool of
choice will be excited to know that Enscape has expanded their popular real-time rendering and VR
experience to work with it. If you already know about Enscape, you will be happy to hear that all the
same features work in Rhino. If you are new to Enscape, I think you are in for a treat!

Real-time Rendering and Virtual Reality with Rhino - Enscape
3D rendering is nothing but a 3D model that consists of a combination of wires and lines in the
skeleton form when covered with a texture that recreates the real-life images which consist of
colors, dispersal, amount of reflection etc.

In traditional computer graphics, 3D objects are created using high-level surface representations
such as polygonal meshes, NURBS patches, or subdivision surfaces.

This page gives a grid of intersection routines for various popular objects, pointing to resources in
books and on the web. The most comprehensive books on the subject are Geometric Tools for
Computer Graphics (GTCG) and Real-Time Collision Detection (RTCD); the former is all-
encompassing, the latter more approachable and focused. A book focused in large part on
object/object intersection ...

Research: My research interests are in computer graphics, computer vision, parallel computing and
human computer interaction. I have conducted a wide range of research on shape modeling/editing,
texture mapping/synthesis, real-time rendering, GPU parallel computing, real-time face tracking, and 3D printing.

Research Highlights: Face2Face is a real-time face tracker whose analysis-by-synthesis approach precisely fits a 3D face model to a captured RGB video. This produces high accuracy tracking, allowing for photo-realistic re-rendering and modifications of a target video: in a nutshell, one can change the expressions of a target video in real time.
