MVD-affected Cavaliers. Anesthesia tends to reduce blood pressure, which in turn may slightly reduce the volume of mitral valve regurgitation. Particularly in older dogs, anesthesia may have an adverse effect upon the blood pressure and kidney function, rather than on any cardiac function.

Anesthesia and Sedatives in Cavalier King Charles Spaniels
Knowledge of epicardial pacing is required for the intra- and postoperative management of patients undergoing cardiac surgery. While the majority of patients do not require pacing to facilitate separation from cardio-pulmonary bypass, it is difficult to select those who may subsequently require pacing during their early postoperative course.

Temporary epicardial pacing after cardiac surgery: a ...
Cardiac surgery, or cardiovascular surgery, is surgery on the heart or great vessels performed by cardiac surgeons. It is often used to treat complications of ischemic heart disease (for example, with coronary artery bypass grafting); to correct congenital heart disease; or to treat valvular heart disease from various causes, including endocarditis, rheumatic heart disease, and atherosclerosis.

Cardiac surgery - Wikipedia
Anesthesia or anaesthesia (from Greek "without sensation") is a state of controlled, temporary loss of sensation or awareness that is induced for medical purposes. It may include analgesia (relief from or prevention of pain), paralysis (muscle relaxation), amnesia (loss of memory), or unconsciousness. A patient under the effects of anesthetic drugs is referred to as being anesthetized.

One must be sure that cardiac surgical patients are warm after surgery, as a cool environment is used in the operating room. Postoperative hypothermia can occur, which results in shivering, high oxygen consumption, and increased cardiac stress. Acid–base disorders must be identified and corrected according to their underlying cause.
